Date:

RECRUITMENT SYSTEM

AIM:

To create an automated system to perform the Recruitment System Process.

(I) PROBLEM STATEMENT:

The recruitment system allows the job seekers to enroll their names through the process of registration. The employee also can get the list of available candidates and shortlist for their company requirement. Once the applicant enrolls he receives an id, which helps him in further Correspondence. A fees amount is received from the job seekers for enrollment. This system makes the task of the job seeker easier rather than waiting in queue for enrollment. This also reduces the time consumption for both for the job seeker and employee.

(II) SOFTWARE REQUIREMENT SPECIFICATION:

2.1 PRODUCT PERSPECTIVE

The PAS acts as an interface between the 'applicant' and the 'administrator'. This system tries to make the interface as simple as possible and at the same time not risking the security of data stored in. This minimizes the time duration in which the user receives the recruitment.

2.2 SOFTWARE INTERFACE

- **Front End Client** - The applicant and Administrator online interface

is built using JSP and HTML. The Administrators's local interface is built using Java.

- **Web Server** - Glassfish application server (SQL Corporation).
- **Back End** - SQL database.

HARDWARE INTERFACE

The server is directly connected to the client systems. The client systems have access to the database in the server.

(III)USECASE DIAGRAM:

The Recruitment Automation system use cases are:

UML CLASS DIAGRAM:

The UML class diagram is to illustrate class interfaces and their actions. They are used for static object modeling, we have already introduced and used their UML diagram while domain modeling.

Fig.5. UML CLASS DIAGRAM

UML SEQUENCE DIAGRAM:

A sequence diagram illustrates a kind of format in which each object interacts via message. It is generalize between two or more specialized diagram.

Fig. 6.1 SEQUENCE DIAGRAM FOR Register:

Fig.6.2. SEQUENCE DIAGRAM FOR STATUS

Fig.6.3. SEQUENCE DIAGRAM FOR Admin

Notify Vacancy:

UML COLLABRATION DIAGRAM:

Communication diagram illustrate that object interact on a graph or network format in which object can be placed where on the diagram. In collaboration diagram the object can be placed in anywhere on the diagram. The collaboration comes from sequence diagram.

PARTIAL LAYERD LOGICAL ARCHITECTURE DIAGRAM:

DEPLOYMENT DIAGRAM AND COMPONENT DIAGRAM

Deployment diagrams are used to visualize the topology of the physical components of a system where the software components are deployed.

Fig.9.1.DEPLOYMENT DIAGRAM

Component Diagram

Component diagrams are used to visualize the organization and relationships among components in a

RESULT:

Thus the mini project for recruitment system has been successfully executed and codes are generated.
