

Ex.No:4

Date: EXAM REGISTRATION SYSTEM

AIM: To create a system to perform the Exam Registration system

(I) PROBLEM STATEMENT:

Exam Registration system is used in the effective dispatch of registration form to all of the students. This system adopts a comprehensive approach to minimize the manual work and schedule resources, time in a cogent manner. The core of the system is to get the online registration form (with details such as name, reg.no etc.,) filled by the student whose testament is verified for its genuineness by the Exam Registration System with respect to the already existing information in the database.

(II) SOFTWARE REQUIREMENT

SPECIFICATION: 2.1 SOFTWARE

INTERFACE

- **Front End Client** - The student and Controller online interface is built using JSP and HTML. The Exam Controller's local interface is built using Java.
- **Web Server** - Glassfish application server (SQL Corporation).
- **Back End** - SQL database.

2.2 HARDWARE INTERFACE

The server is directly connected to the client systems. The client systems have access to the database in the server.

(III) USECASE DIAGRAM:

The Exam Registration use cases in our system are:

1. Login
2. View exam details
3. View fees details
- Pay fee
4. Display details
5. Logout

(IV) ACTIVITY DIAGRAM:

Fig. 4.USECASE DIAGRAM FOR EXAM REGISTRATION SYSTEM

(v) CLASS DIAGRAM:

The class diagram, also referred to as object modeling is the main static analysis diagram. The main task of object modeling is to graphically show what each object will do in the problem domain. The problem domain describes the structure and the relationships among objects.

Fig.5. CLASS DIAGRAM FOR EXAM REGISTRATION SYSTEM

(vi) INTERACTION DIAGRAM:

A sequence diagram represents the sequence and interactions of a given USE-CASE or scenario. Sequence diagrams can capture most of the information about the system. Most object to object interactions and operations are considered events and events include signals, inputs, decisions, interrupts, transitions and actions to or from users or external devices.

An event also is considered to be any action by an object that sends information. The event line represents a message sent from one object to another

(VII) PARTIAL LAYERD LOGICAL ARCHITECTURE DIAGRAM:

(VIII)

DEPLOYMENT DIAGRAM AND COMPONENT DIAGRAM

Deployment diagrams are used to visualize the topology of the physical components of a system where the software components are deployed.

RESULT:

Thus the mini project for Exam Registration system has been successfully executed and codes are generated.
